

# SIGHTLINE ASSURE<sup>®</sup> FROM STRATUS<sup>®</sup>

## Simply Powerful Performance Monitoring

**Ensure mission-critical industrial automation systems are continuously available to prevent downtime and data loss.**

Sightline Assure from Stratus is a simple, yet powerful performance monitoring solution purpose-built to continuously maintain the health and availability of mission-critical, fault-tolerant servers and industrial software applications.

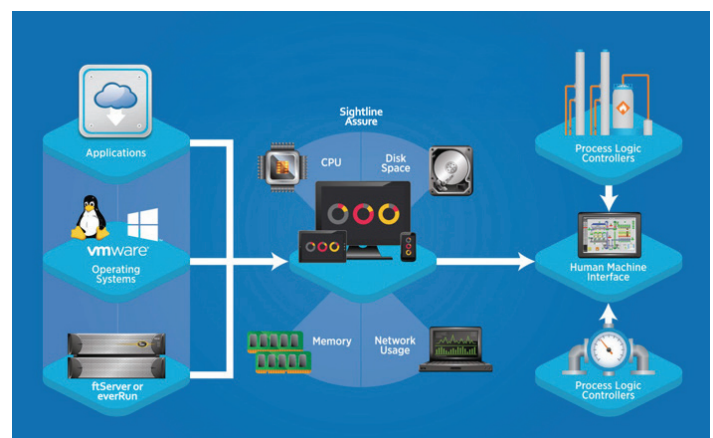

Developed to ensure always-on availability for the industrial automation and manufacturing industry, Sightline Assure is available as an annual software subscription.

Sightline Assure is an easy-to-use web application based on 15 years of monitoring expertise and industry best practices without the complexity of traditional IT-industry software. Designed to be simple on the surface, Sightline Assure is built upon Sightline's powerful Enterprise Data Manager (EDM™) analytics engine, which collects and analyzes hundreds of real-time system metrics to optimize the performance of Fortune 500 system environments.

Unlike network resources managed remotely by corporate IT departments, operations engineers are responsible for managing the HMI software applications that automate the plant environment. Sightline Assure is designed to provide plant managers and production line operators with a single, unified view of the status of the hardware, operating systems and software applications needed to keep the plant environment running at all times.

### Key Benefits

- Continuously monitor the health and availability of one or many servers from a single dashboard
- Maximize uptime for the OS and software applications running in physical or virtual environments
- Access a single-pane-of-glass view of your mission-critical industrial automation infrastructure
- Detect system performance issues ahead of time and respond before downtime occurs
- Continuously monitor system resources and automatically restart unavailable applications
- Customize alert thresholds to provide real-time email notifications of potential issues

*Sightline Assure is built to work with leading HMI industrial automation systems to anticipate performance issues and prevent downtime and data loss before it occurs.*

## Key Features

### Simple, Intuitive, Easy-to-Use Dashboard

The Sightline Assure dashboard allows manufacturing line managers or controls integrators to identify system performance issues ahead of time and take immediate action to prevent potential downtime. All active operating system, application and hardware alerts are aggregated from one or more servers, displayed on the dashboard in real time and color-coded accordingly: grey (good), yellow (warning) or red (critical).

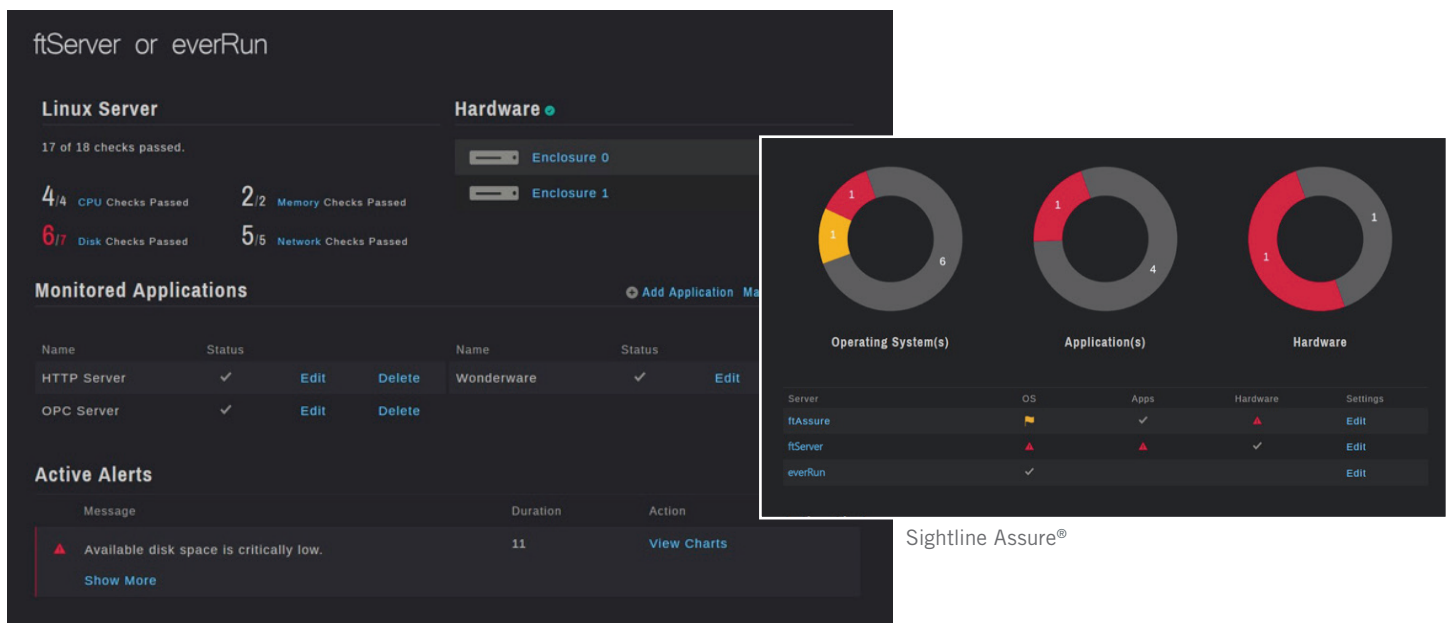

### Powerful, Proprietary Analytics Engine

Sightline Assure continuously monitors physical and virtual system resources and performs hundreds of ongoing CPU, disk space, memory and network usage checks. Users receive early warning reports of capacity issues, degraded application performance and critical system errors. They can also visualize, drill-down and correlate data across multiple servers, with support for Windows® and Linux® operating systems, VMware® servers and guests on ftServer® and Windows and Linux on everRun®.

### Detailed Alert History and Email Notifications

The system highlights active alerts and provides a comprehensive alert history for all mission-critical servers, operating systems and monitored applications, detailing the duration of a problem, when it was detected and how long before it was resolved. Sightline Assure also allows users to customize individual alert thresholds when resources reach a maximum or minimum level, and configure email notifications when performance issues require immediate attention.

- Support for VMware, Windows and Linux operating systems on ftServer
- Support for Windows and Linux operating systems on everRun
- Designed to integrate with leading HMI software packages
- Compatible with all modern web browsers and mobile devices
- Single, unified, easy-to-use dashboard with drill-down details
- Daily or weekly reports automatically sent via email
- Customizable alert notifications and alert history views

Sightline Assure®

*Sightline Assure provides a single, unified, at-a-glance view of the health and availability of industrial IT hardware, operating systems and software applications.*
